Soleum Health Spa Sea Climate Chamber

Soleum Spas

Said to be the first sea climate cabin for outdoor use, Soleum's self-contained chamber offers halotherapy, thalassotherapy, infrared radiant heat and colour therapy. Available in three shapes – an oval Egg version, a round Omega chamber and a double-sized Ellipse chamber – spas can select from moist brine or dry salt-inhalation options. The inhalation technology in the chamber can also atomise tea extremely finely, enabling the cabin to be used as a Teedarium.

Made in Austria, the Sea Climate Chamber can be controlled remotely, allowing operators to check temperatures and energy consumption as required.

Coloured light emitted from the cabin ceiling and behind the benches can be customised via smart controls, as can the built-in sound system.

"The Soleum is completely self-contained and offers more than just a saline mist. It's a hot experience with infrared heat; it can be a steam bath; and it even allows the user to inhale herbal tea mists like chamomile, sage, thyme or peppermint," says Thomas Kiesenebner, designer and CEO of Soleum Spas.

Luxury editions of the Sea Climate Chamber, created in cooperation with Italian mosaic manufacturer SICIS, have hand-set mosaics and are available in more than 900 colours and designs.

Opatra Dome

Opatra

The Opatra Dome facial skin analyser measures the surface and subsurface of the skin using state-of-the-art digital imagery. Using RGB visible and PL polarised light along with UV spectrum imaging technology, AI and image analysis, it captures multispectral photos of the face, allowing therapists to identify fine lines and wrinkles, spots, texture, porphyrins, UV spots, moisture levels and pigmentation.

The device creates customised reports for use in client education and treatment planning, allowing spas to develop more targeted treatment programmes and track progress over time.

Opatra Dome can provide ten facial problem reports in only 25 seconds, and also predicts skin development over the next three to five years, allowing clients to see their ageing trends ahead of time. Spas can import custom products and treatments into the software with comprehensive suggestions and customised solutions. www.opatra.com

Twilight lantern

Warli

The ideal complement to outdoor treatment areas, spa gardens, terraces and swimming pools, Warli's Twilight lantern is a portable luminous LED lantern made from stainless steel and blown opal glass, with fine handmade engravings.

Perfect for outdoor use, Twilight is enriched by satin colours with a corrugated effect in dark bronze, light grey, white and bordeaux. Available in three sizes, the lanterns offer eight hours of lighting at full power and are designed to automatically turn off at dawn.

Designer Paolo Zani says he chose to make the stylish lamps from glass and stainless steel due to their ability to resist atmospheric wear and tear.

"Twilight was born from a thought on how to bring light into outdoor spaces," says Zani. "The light had to be a portable object that could decorate and illuminate different situations, for example a pool or humid areas such as the spa and hammam."
